Listing of the Claims

- 1. (Original) An assembly for preparing an intervertebral disc space between a first vertebra and a second vertebra to receive a prosthesis, the assembly comprising:
 - a distractor comprising a first distraction arm and a second distraction arm;
- a first anchoring device attached to both the first distraction arm and the first vertebra; and
- a second anchoring device attached to both the second distraction arm and the second vertebra,

wherein the first anchoring device moves independently of the second anchoring device.

- 2. (Original) The assembly of claim 1 wherein the movement of the first anchoring device is in a sagittal plane
- 3. (Original) The assembly of claim 2, wherein the movement of the first anchoring device is a pivotal movement.
- 4. (Original) The assembly of claim 1, wherein the movement of the first anchoring device is a linear movement in an anterior-posterior direction.
- 5. (Original) The assembly of claim 1 wherein the first anchoring device comprises a pivot mechanism and the first distracting arm comprises a pin, and further wherein the pivot mechanism engages the pin permitting at least limited rotation of the first anchoring device.
- 6. (Original) The assembly of claim 1 wherein the first anchoring device comprises an elongated shaft and the first distracting arm comprises an elongated recess and further wherein the elongated shaft slidably engages the elongated recess.
- 7. (Original) The assembly of claim 1 further comprising:

an alignment guide interposed between the first and second anchoring devices for sagitally aligning the first and second anchoring devices.

- 8. (Original) The assembly of claim 7 wherein the alignment guide comprises a pair of apertures through which a pair of fasteners may pass to fasten to the vertebral bodies.
- 9. (Original) The assembly of claim 7 wherein the first anchoring device comprises a restraint pin deployable into the first vertebral body as one of the fasteners is passed through one of the apertures and fastened to the first vertebral body.
- 10. (Original) The assembly of claim 1 wherein the first anchoring device comprises an adjustable seat for leveling the anchoring devices.
- 11. (Original) The assembly of claim 1 further comprising:
 a measurement instrument attached to the first anchoring device.
- 12. (Original) The assembly of claim 1 further comprising:
 a shaping instrument attached to the first anchoring device.
- 13. (Withdrawn) A method of preparing an intervertebral disc space, between first and second vertebral bodies of a vertebral column, to receive an intervertebral prosthesis, the method comprising:

fixedly attaching first and second anchoring devices to the first and second vertebral bodies, respectively;

attaching a distraction assembly to the first and second anchoring devices, wherein a first arm of the distraction assembly is attached to the first anchoring device and a second arm of the distraction assembly is attached to the second anchoring device;

moving the first and second arms of the distraction assembly, in parallel, relative to one another;

independently moving the first and second anchoring devices relative to the first and second arms, respectively.

- 14. (Withdrawn) The method of claim 13 further comprising shaping a first endplate of the first vertebral body independently of shaping a second endplate of a second vertebral body.
- 15. (Withdrawn) The method of claim 14 further comprising attaching a shaping instrument to the first distractor arm prior to shaping the first endplate.
- 16. (Withdrawn) The method of claim 13 wherein the first anchoring device independently pivots about a rotation pin in the first distractor arm.
- 17. (Withdrawn) The method of claim 13 wherein the first anchoring device independently pivots about a connector extending from the first distractor arm.
- 18. (Withdrawn) The method of claim 13 wherein the positioning of the first and second anchoring devices is in a sagittal plane.
- 19. (Withdrawn) The method of claim 18 wherein the independent movement of the first and second anchoring devices is in the sagittal plane.
- 20. (Withdrawn) The method of claim 13 wherein the first and second anchoring devices are fixedly attached to the first and second bodies equidistant from the center of the intervertebral disc space.
- 21. (Original) An assembly for preparing an intervertebral disc space between first and second vertebral bodies to receive a prosthesis, the assembly comprising:
- a distractor, wherein the distractor comprises a first distracting arm in parallel relation to a second distracting arm;

PATENT Attorney Docket No. 31132.237(PC1077.00) Customer No. 000046333

a first anchoring device coupled between the first distracting arm and the first vertebral body, wherein the first anchoring device comprises a first pivot mechanism and the first distracting arm comprises a first pivot pin and further wherein the first pivot mechanism pivotally engages first pivot pin; and

a second anchoring device coupled between the second distracting arm and the second vertebral body, wherein the second anchoring device comprises a second pivot mechanism and the second distracting arm comprises a second pivot pin and further wherein the second pivot mechanism pivotally engages second pivot pin.

- 22. (Original) The assembly of claim 21 further comprising an alignment guide extending between the first and second anchoring devices.
- 23. (Original) The assembly of claim 22 further comprising a milling instrument pivotally attached to the instrumentation guide.
